

Intersoft Electronics – Technical Training and Applications Specialist

In search of Technical Training and Applications Specialist

Intersoft Electronics is a Belgian company active in air traffic control (ATC) and air defense radar systems. Our mission is to develop and deliver advanced solutions that provide our customers with reliable radar coverage, contributing to safer airspace worldwide. Our products and services are used globally.

With your valuable expertise, you will play a key role in translating complex technical knowledge into practical applications and high-quality training programs, both for internal teams and for customers worldwide. This role is essential to positioning Intersoft Electronics.

Your tasks and responsibilities

In this role, you will build in-depth expertise across Intersoft Electronics' entire product portfolio, with a strong focus on RF systems, radar performance, and measurement and analysis techniques. You will apply this knowledge daily as you support customers in understanding and correctly using our systems.

In addition, you will actively engage with customers to understand their operational needs and challenges. Based on these interactions, you will help identify technical and commercial opportunities and provide valuable input for improving products, services, and training materials.

You will also contribute to the development and maintenance of training materials and digital assets such as presentations, manuals, videos, and documentation. Everything is designed in a modular format, ensuring it can be flexibly adapted for different target audiences, levels of depth, and training types.

You will work closely with Engineering, Services, Marketing, HR, and IT, ensuring that product knowledge, training materials, customer needs, and internal processes are optimally aligned. You will also support initiatives related to knowledge sharing, training effectiveness, and tooling within the IE Academy.

Your profile:

- We are looking for a candidate with strong technical skills and a background in electronics, RF systems, radar technology, or a related field.
- You have a clear interest in applying technical knowledge in practical ways and in delving deeper into complex systems and measurement methods.
- Strong communication and presentation skills are essential for conveying technical insights clearly and in a structured manner to diverse audiences.
- A proactive and customer-focused work style, combined with teamwork and knowledge sharing, forms an important foundation.
- Willingness to travel for customer contact and training is part of the role.
- A strong desire to learn and continuously develop.

What do we offer you?

- A challenging and varied role in a high-tech, international environment where you can combine technical

expertise, customer interaction, and training.

- The opportunity to contribute to the development of the IE Academy and to play a key role in positioning Intersoft Electronics as a knowledge-driven partner.
- A dynamic working environment with experienced and supportive colleagues, and continuous opportunities for personal and professional development.
- A competitive salary package with additional benefits.
